Complete Lifts from Hydroware

HydroElite® drive and controlsystem

Hydroelite is a drive- and control system for hydraulic lifts which are fully tested in our production before delivery and is therefore prepared for a quick installation. The HydroElite is provided in the versions Veni and Vidi. They can also be made as a machine room less version as well as a mini version.

The heart of the HydroElite drive- and control system is the unique valve. It is equipped with a servo valve which allows the lift to travel directly into the floor, without creeping. This reduces the travel time and the energy consumption dramatically, it also increases the travel capacity compared to traditional electronic valves.

The system is entirely self-learning and self-adjusting. The commissioning is made easy through two learn trips, one for the hydraulics and one for the floor setting. No manual adjustments are required, and the stopping accuracy increases with each trip.

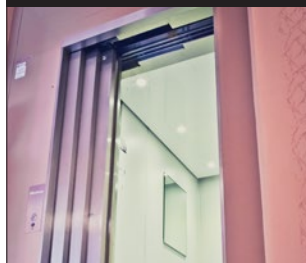

That the drive- and control system comes from the same supplier secures a good functionality and a simple handling regarding support, maintenance and warranties.

We deliver quality products that make the lift complete

Cars

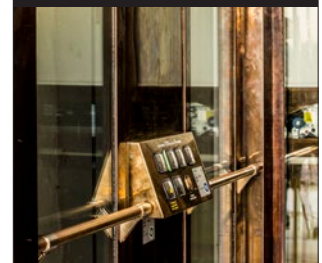

Doors

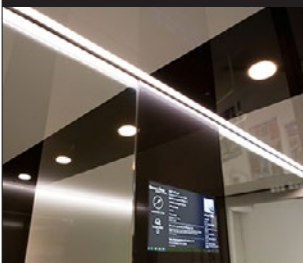

Panels
